(a) Each sound box gets its own certificate
(illustration with simulated points; target 5%)
patient
Body mass index (kg/m²)
Age group (1 = 18 to 24, ..., 13 = 80 or older)
AXp box
n_B = 420, errors = 4
bound 5.5% > 5%:
not certified
Inflated box (path step)
n_B = 3,500, errors = 60
bound 3.0% ≤ 5%:
certified and released
Widest inflated box
n_B = 6,100, errors = 420
bound 8.5% > 5%:
not certified
Recorded outcome: no
Recorded outcome: yes
(b) Why the release policy needs
its own test
Box 1: 5 / 100 = 5%
5 errors
95
correct
5 errors
Box 2: 5 / 100 = 5%
Released together: 10 / 105 = 9.5%
Valid box certificates do not bound the error among
released patients; the policy is certified on split 2.
